

ROCKLAND WAX GUARD™

AFFORDABLE PROTECTION

Wax Guard™ provides an economical option for protecting hardwood trailer floors.

Wax Protection that Works

Using an environmentally friendly formula, Wax Guard™ reduces water absorption and is not slippery when wet. The wax-fortified product permeates the wood fibers creating a water repelling barrier of protection.

BENEFITS OF WAX GUARD™

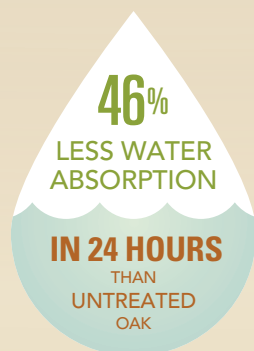

Water Repelling — Water is detrimental to laminated hardwood floors. Protecting the wood and glue lines from moisture will extend the service life of your trailer floor. Wax Guard™ reduces water absorption by 46% as compared to unprotected wood. Avoiding water is the best answer, but when that is not an option, specify Rockland Wax Guard™.

Beading Equals Protection — As with any coating, when you see the water beading, you know it is working. Beading is measured by contact angle, and Wax Guard™

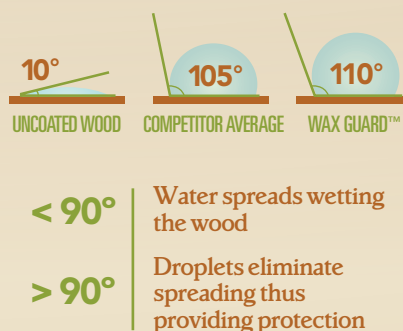

produces a contact angle greater than the industry average and 10X better than untreated wood. The answer to protecting your floor and increasing the service life is Rockland Wax Guard™.

Slip Resistant — Many wax-based top coats reduce the floor's static coefficient of friction (COF), leading to diminished traction. Wax Guard™ meets the .5 COF standard established by OSHA as a reasonable measure of slip resistance. Wax Guard™ provides the desired protection from water without jeopardizing safety.
